

THE LUNG CANCER SCREENING PROGRAM AT JEFFERSON HEALTH

Low-dose computed tomography (CT) scanning can help find lung cancer early when treatment is most effective.

The Lung Cancer Screening Program at Jefferson Health offers a personalized, one-on-one consultation with our comprehensive team, including an oncology nurse navigator and nurse practitioner.

A screening is only for people who are most likely to develop lung cancer:

- **50-80 Years of Age**
- **Current Smoker**
- **Former Smoker**
- **Significant Smoking History**

For thoracic conditions, our patients have access to a talented team of medical professionals with Jefferson Health's comprehensive Thoracic Surgery Program. This program is the largest in Philadelphia and committed to minimally invasive thoracic surgery, which typically offers smaller incisions, shorter hospital stays, less pain and faster recoveries.

Call the Lung Cancer Screening Hotline at 215-612-4137 for more information and to make your appointment today!
